SINGLE FAMILY DETACHED ARCHITECTURAL STANDARDS

The Single Family Detached Architectural Standards and Single Family Attached Architectural Standards replace Sections 10.6.7.E and 10.6.7.F of the Erie Unified Development Code, as the same may be amended from time to time.

1. Architectural Variety and Character

a. Architectural Variety

- Design Standards
 - No identical model plan elevation shall be repeated directly across any street from the same model plan and elevation.
 - No identical model plan elevation shall be repeated more than once within every 4 lots on the same side of any street.
 - A minimum of 3 recognizably different model plans with 3 recognizably different elevations be submitted to the Town for review.
- Tracking
 - It shall be the responsibility of the developer to provide to the Town a plat sheet tracking document that maintains a record of home model variety for every development parcel. The developer shall demonstrate compliance with this Section prior to issuance of a building permit.

b. Architectural Character

Each single family detached model plan and elevation shall demonstrate the following design attributes:

- Design Standards:
 - Each Elevation shall include a minimum of two windows (or one window and one door) per floor. There shall be at least one opening (window or door) per quadrant of the elevation so that long stretches of wall are broken up by fenestration. However, elevations with a partial or smaller upper level (such as a front facing gable) may be allowed to have a minimum of one window in the upper story and the window shall be appropriate in size to the scale of the upper level mass.
- Wall Plane Change:

Window Articulation that adds shadow and visual interest is encouraged.

The wall plane change shall be proportional to the building elevation, have a depth of at least 12 inches, be at least a full story in height, and be at least 6 feet wide. Recessed planes shall be recognizable as part of the elevation being enhanced.

Each front and rear elevation shall include more than one wall plane,

Or, on front elevations one wall plane may be allowed when one or more of the following is provided.

 - Window(s) or Door(s) exceeding the minimum required per floor. The use of shutters may also enhance the total scale of fenestration provided per elevation quadrant.

FRONT ELEVATION

- A porch or stoop that is covered.
- Roof Dormers.
- A variety of roof forms shall be used. Single unbroken roof pitches should be avoided except where a single roof treatment is an essential element of the Architectural Style. (e.g. Mansard)

D. The main roof shall extend beyond the primary façade by a minimum of 12 inches.

Or, on homes with a

roof pitch of 10:12 or greater, a gable rake of less than 12 inches may be permitted.

Models with gable rake overhangs of less than 12 inches shall not be located directly across the street from each other or more than once within every 4 lots on the same side of any street.

- An elevation of the home that faces a street, park, trail corridor or open space area shall provide an “enhanced elevation” which further improves the architectural aesthetic of the residence; an enhanced elevation shall provide three of the following design enhancements. The design enhancement shall be applied in a manner that is consistent with the style of the home. Side and rear elevation design enhancements shall be consistent with the design elements of the front elevation.

- Window(s) of sufficient size and appropriate scale to add character to the elevation.
- A change in wall plane as defined in subsection 1.b.i.B above.
- A porch, patio, or deck that is covered.
- The use of architectural detail elements such as shutters, vents, eave and/or gable brackets, exposed rafter tails, corbels, lintels, trellises, columns or pilasters, additional exterior accent materials, etc. which in combination create an enhanced architectural style.
- The use of two or more exterior materials. Additional materials should be used in locations where it is logical and appropriate and should continue to a natural transition point. To achieve the enhancement the additional material(s) shall be used to cover a minimum of 15% of the elevation being enhanced. Exterior materials may include but are not limited to masonry (cultured stone, stone, brick, stucco, or tile), lap siding, shingles, board and batten, or other decorative siding treatment. Different application styles of the same material, for example the application of lap siding in different widths, does not constitute a second material.

- Columns or posts extending more than 36 inches above the ground which support structural elements such as porches, decks, or roofs should appear to be of adequate mass to support the structure above. (No exposed 4” x 4” posts shall be allowed more than 36 inches above the ground). Columns supporting upper story decks should be 8” x 8” minimum finished.

ii. Materials

- All exterior materials shall be of high quality, used in applications and treated appropriately to provide and attractive and long lasting appearance.
- When masonry is used it should be used in locations where its mass is logical and appropriate. In instances where masonry wraps the exterior corner of the home the masonry should continue to a natural transition point such as the inside corner of a projection wall, a column, a door or window or other logical point. In cases where no such feature exists near the corner, the masonry wrap shall extend at least six feet from the corner.

2. Orientation of Dwellings to the Street

- Each dwelling unit shall face the front lot line of the property and have at least 1 primary pedestrian doorway for access to the dwelling unit located on the elevation of the dwelling unit facing the front lot line of the property. The doorway shall be no more than 12 feet from the most forward plane of the forward most living space within the house and shall be clearly visible from the street or public area adjacent to the front lot line (example below).

In conditions where side loaded garages are utilized, the following standard applies:
- The doorway shall be no more than 12” from the front facing garage wall plane.

- For Single Family Front Loaded Lots adjacent to streets on two sides (corner lots), the dwelling may be oriented to either adjacent street and the pedestrian doorway may thus be located facing either adjacent street.

3. Garages

These regulations for garages shall be applied to non-living space or storage areas within garages whether used for storage of automobiles or other items.

a. Front Loaded Garages:

- Garages shall be recessed a minimum of 8'-0” from the forward most façade, front porch, or covered stoop, whichever length is greatest, for front loaded lots 70’ or greater in width.
- Garages shall be recessed a minimum of 2'-0” from the forward most façade, front porch, or covered stoop, whichever length is greatest, for front loaded lots between 45’ and 69’ feet in width.
- The width of a front-loaded garage shall not exceed 65% of the width of the front elevation.

b. Side Loaded Garages:

- On corner lots where the garage is oriented to the side lot line rather than the front lot line, the garage must be set back a minimum of 31’ from the front stoop or porch or from the forward most plane of the front facade when there is not a stoop or porch.

c. Alley Load Garages:

- Garages must be oriented to and accessed from the alley when the dwelling is located on a lot with alley access.

d. Three or More Car Garage Orientation:

When garage bays exceed two, the additional garage bays shall either:

- Have a different orientation from the first two; or
In conditions where side loaded garages are utilized, the following standards apply:
-For use in two story homes, the upper floor living space must extend forward over the side loaded garage but may be set back a maximum of 6’ from the front face of side garage.
-Shall make up no more than 20% of 60’ wide lots.
- Shall be recessed behind the first two by at least two feet when having the same orientation; or
- Shall be tandem to the first two.

4. Front Stoop

A front stoop is comprised of stairs and a platform which provides access to a front door when the threshold is not at grade and may be covered or uncovered. For dwelling units with a front stoop, the front stoop platform shall be at least 12 square feet.

5. Front Porches

A front porch is comprised of stairs, platform, and columns or railing and provides access a font door when the threshold is not at grade. A front porch has a generous sized platform which creates an outdoor living space at the front of the house. For dwelling units with a front porch, the front porch shall be at least 60 square feet, and shall have a minimum depth of 6 feet as measured from the stud wall to the column centerline or railing.

SINGLE FAMILY ATTACHED ARCHITECTURAL STANDARDS

The Single Family Detached Architectural Standards and Single Family Attached Architectural Standards replace Sections 10.6.7.E and 10.6.7.F of the Erie Unified Development Code, as the same may be amended from time to time.

Additional Standards for Duplex & Townhome Areas

1. Building Design and Character

a. General Purpose

The purposes of these building design and character standards are to:

- Establish a more predictable approach to Duplex and Townhome areas that encourages creativity in design for individualism of buildings or dwelling units that results in attractive, long-lasting neighborhoods.

b. Building Orientation

i. Intent

To organize the primary entrances and facades of Duplex or Townhome buildings with a clear orientation towards a Street or Common Open Space/Greencourt,

(A) To create an integrated neighborhood appearance for Duplex and Townhome areas that establishes a pattern that is integrated with adjacent uses instead of segregated as a separate sub-community.

ii. Design Standards

(A) The primary entrance and facade of individual buildings shall be oriented towards:

- Primary internal or perimeter streets, or
- Common open space/Greencourts, such as interior courtyards, parks, or on-site natural areas or features with a clearly defined and easily accessible pedestrian circulation system.

(B) Primary entrances and facades shall not be oriented towards alleys, parking lots, garages, or carports.

c. Architectural Character

i. Intent

(A) To improve the appearance of Duplex and Townhome areas through the incorporation of architectural detailing, facade articulation, and other features designed to provide a more distinct character and human scale for buildings of all sizes.

(B) To encourage the use of architectural styles that reinforces the Town's traditional character.

ii. Design Standards

(A) All sides of a Duplex or Townhome building shall display a similar level of quality and architectural detailing. The majority of a building's architectural features and treatments shall not be restricted to a single facade. Building details, including roof forms, windows, doors, trim, and siding materials, shall reflect the architectural style of the building.

(B) Attached dwelling units may either express each individual unit or give each building the appearance of a large single-family home.

(C) The maximum length of any Townhome building shall be 156 feet.

(D) The incorporation of a variety of roof forms is strongly encouraged on differentiated dwelling units. Generally, Duplex or Townhomes shall incorporate roof pitches of between 3:12 and 16:12; however, alternative roof forms may be permitted at the discretion of the Community Development Director.

(E) Roof overhangs shall extend beyond the primary façade by a minimum of 12 inches.

Or, on homes with a roof pitch of 10:12 or greater, a gable rake of less than 12 inches may be permitted.

Models with gable rake overhangs of less than 12 inches shall not be placed adjacent to or across the street from 1 another.

(F) Horizontal variations in materials along the facade of a Duplex or Townhome building shall occur in conjunction with a change in wall plane, preferably at the inside corner of a wall.

d. Architectural Variety

i. Intent

(A) To ensure that individual groupings of Duplex or Townhome buildings within a larger development exhibit a distinct variation in size and mass that allows them to be easily distinguished from surrounding building groupings.

(B) To avoid the bleak, "barracks-type" appearance associated with large concentrations of identical or very similar structures.

(C) Townhomes

- No more than 6 townhome dwelling units may be attached in any single row or building cluster.
- Within each townhome row or cluster, individual dwelling units shall either be differentiated or may express a purposely uniform design.

A. When dwelling units are to be differentiated, dwelling units shall be differentiated through 2 or more of the following methods,

- Use of distinct color variation between individual dwelling units;
- Use of distinct variations in materials between individual dwelling units;
- Use of distinct variations in architectural style or features, such as a porch or similar feature, between individual dwelling units;
- Use of distinct variations in roof form,
- A variation in the plane of the front facade to provide a minimum 1 foot variation between individual dwelling units.

B. When uniformity (sameness or pattern repetition) in design is proposed, this shall be expressed through repetition of 2 or more of the following methods,

- Use of materials both in type and location;
- Size, style, and patterning of windows;
- Size and detailing of front porches;
- Roof dormers, roof form, and roof pitch.

(D) Duplexes

A continuous row of identical homes along a block shall be prohibited. Individual structures shall be differentiated through 2 or more of the following methods:

- Use of distinct color variation and materials between individual structures;
- Use of distinct variations in roof form, or
- Use of distinct variations in architectural features, such as porches, roof form, windows, or similar feature, between individual structures.

(1) Models with identical facades shall not be placed adjacent to or across the street from 1 another.

e. Materials

i. Intent

(A) To maximize the quality, value, and longevity of multi-family neighborhoods through the use of durable materials that will minimize maintenance costs and improve the overall appearance of the development.

(B) To encourage the use of recycled and other environmentally- friendly, Leadership in Energy and Environmental Design (LEED) certified building materials.

ii. Design Standards

(A) Primary exterior building materials on multi-family structures shall be constructed from durable materials with product warranties or an industry expected life of a minimum of 25-years.

(B) Exterior Insulating and Finish System (EIFS) shall not be permitted.

(C) All multi-family structures shall utilize durable, environmentally sensitive roofing materials with product warranties or an industry expected life of a minimum of 25 years.

2. Parking and Garage Placement

On-street parking spaces may be counted towards guest parking for a Duplex or Townhome area, provided the on-street spaces are located on an adjacent or internal street that allows on-street parking.

On-street parking spaces being counted towards the minimum requirement for guest parking shall be identified on plans at time of submittal to the Town. Required dwelling unit parking shall be off-street.

Garages shall be accessed from an alley.
